

**In the Specification:**

Page 5, paragraph 3, replace as follows:

Referring now to Figure 2, a perspective view of light source 14 coupled to a coupler 16 is illustrated. Coupler 16 coupled to an optical fiber 18 is illustrated. Coupler 16 has a coupler body 30 having an upper surface 32, a lower surface 34, an output end 36, and an input end 38. Light source 14 is coupled to input end 38. Optical fiber 18 is coupled to output end 36. Coupler body 30 also has angular side surfaces 40, 42 that help direct light to output end 36 as described below. That is, the input end 38 is longer than the output end 36 with the angled side surfaces 40, 42, therebetween. Side surfaces 40, 42 have an angle 54 with respect to the axis to the optical fiber of about 8°.
